

# MEMORY SCREENING

## Worried about memory problems?

Are you concerned about unusual forgetfulness, or having more trouble than normal concentrating, remembering names or previous conversations?

*If your life is complicated by these issues, a memory screening may help you...*

Memory screenings will be conducted by a trained screener. Each private screening will include a standardized test and takes approximately 15 minutes. These tests can help individuals determine whether a follow-up visit with a physician is recommended. These tests are *not* a diagnosis.
